

CORRIGENDUM

In Knak et al, 2020,¹ the error bars (AUC 95% CI) in Figure 3 were incorrect. The corrected error bars appear in the revised figure below. The authors apologize for this error.

Figure 3. Agreement between the objective muscle strength, balance and functional mobility measurements and the subjective GRS. Area under the curve (Y-axis) is reported for both absolute and relative change values for each outcome measure with 95% CI (X-axis). Flex. = flexors, ext. = extensors.
